

THE ACTUAL BUG - Error #450

What Was Wrong

Line 289 in GetAutoValidationMap:

```
vba
```

```
dict(devFunc) = item ✗
```

[item] is a Dictionary OBJECT. In VBA, assigning objects to dictionaries requires [Set]:

```
vba
```

```
Set dict(devFunc) = item ✓
```

Why This Caused Error #450

"Wrong number of arguments or invalid property assignment" = VBA's cryptic way of saying "you forgot Set when assigning an object"

The Fix

One word: [Set]

```
vba
```

```
Set dict(devFunc) = item
```

Test 1.6

Replace AV_Core_v2.1_COMPLETE.bas and run Test1_3_DirectMapTest.

Should now work.
